

AUVIDEA

X221, -LC, -AI

TECHNICAL REFERENCE MANUAL

SCOPE OF WORK

Providing technical information and documentation for the X221, -LC, -AI carrier boards for the AGX Xavier

REPORT NUMBER

38413

ISSUE DATE

[REVISED DATE]

16.NOV.2021

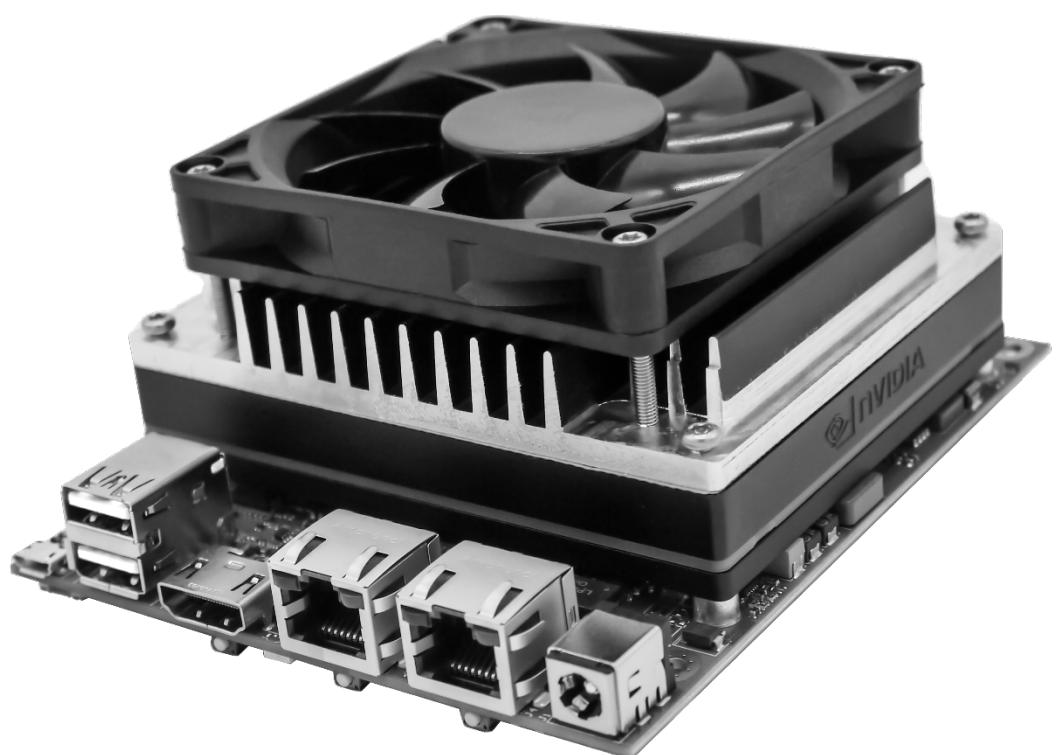

[FEB.2021]

SECTION 1 Document revisions and changes

Document version	Changes
1.0	Initial document, internal verification process
1.1	Internal verification process
1.2	Restructuring of document, added Appendix B, C
1.3	Adding Socket Pins
1.4	Adding Appendix E and fixed missing table in Appendix B

SECTION 2 Product revisions and changes

Product version	Changes
38413-2	Crypto chip
38413-4	Safety MCU, Change of Ethernet controllers, MCU UART to LTE, CAN RX/TX

SECTION 3 Overview

3.1 Model comparison

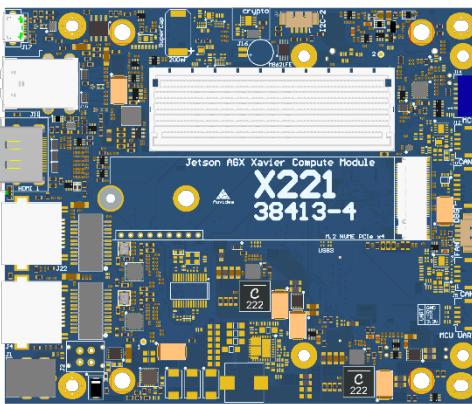

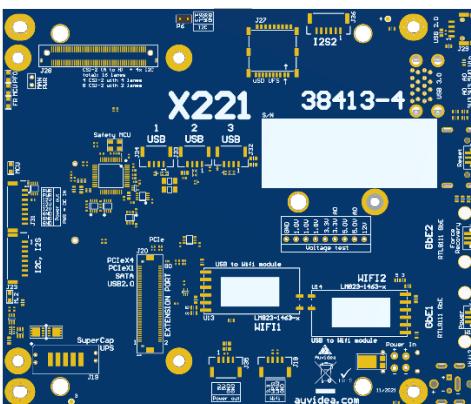

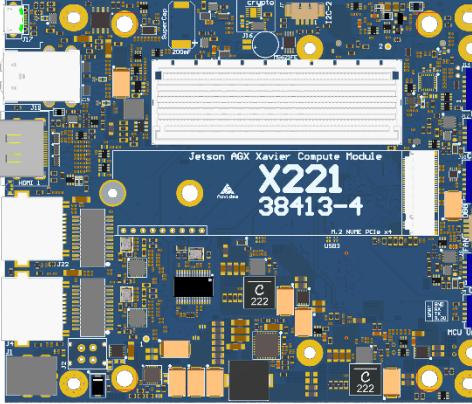

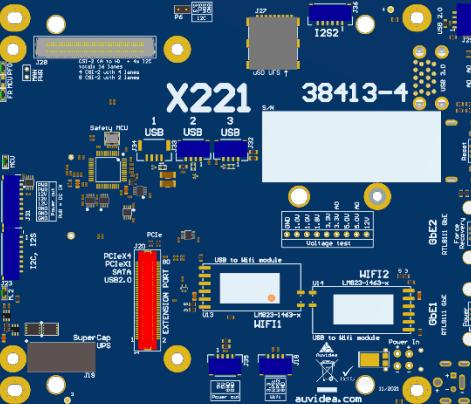

Description	X221-LC (Rev 2)	X221-AI (Rev 2)	X221 (Rev 4)	X221-AI (Rev 4)
2x GbE (RJ45)	1x native, 1x i210 PCIe to GbE	1x native, 1x i210 PCIe to GbE	2x RTL8111 PCIe to GbE	2x RTL8111 PCIe to GbE
HDMI out	1x	1x	1x	1x
USB 2.0	1x micro	4x	1x micro	4x
USB 3.0	2x	2x	2x	2x
LM823 Wifi	-	2x (optional)	-	2x (optional)
Safety MCU (for JAXi)	-	-	-	yes
Basic MCU	yes	yes	yes	-
Remote power control & debug via LTE	-	-	-	yes
MicroSD/UFS card slot	-	1x	-	1x
UART	1x	2x	1x	3x
I2S	-	2x	-	2x
I2C	1x	2x	1x	2x
Extension port for PCIe x4/x1/USB/UART/I2C/GPIO	-	yes	-	yes
Extension port for CSI-2	-	4-8x (optional)	-	4-8x (optional)
Operating Voltage	12V	12-48V	12V	12-48V
Jetson power modes	30W + MAXN	30W	30W + MAXN	30W
Super Cap UPS	-	(optional)	-	(optional)
Power out (5V, 12V)	-	yes	-	yes
Power/Reset/Force-Recovery Buttons	-	yes	-	yes
RTC super cap	200mF	200mF	200mF	200mF
Auto flashing	yes	yes	yes	yes
CAN (RX/TX only)	1x	1x	1x	1x
CAN	-	1x	-	1x
Debug port	-	-	yes	yes
Fan connector (5V, PWM)	1x	1x	1x	1x
RGB LED (GPIO controlled)	-	1x	-	1x
Reverse voltage protection (low voltage drop MOSFET)	yes	yes	yes	yes
Overshoot protection	yes	yes	yes	yes
Rechargeable lithium cell (MS621FE)	(optional)	(optional)	(optional)	(optional)
Crypto authentication chip	-	-	yes	Yes

3.2 Technical specification

Description	Note
HDMI	2.0, 4k60p
USB 3.1	10Gb/s
Physical size	125mm x 104.6mm
Mounting holes	4x M3
Temperature range	-25°C to +80°C
Humidity	Noncondensing humidity
Longevity	No temperature sensitive electrolytic capacitors
	3D STP model available
	Cold temperature monitoring with MCU optional

3.3 Model pictures

	Top side	Bottom side
X221 (Rev 4)		
X221-AI (Rev 4)		
		
<p>The picture shows a prototype custom heatsink, designed for the AGX Xavier. It is designed to mount a standard 80x80mm fan.</p>		

3.4 Power consumption

Description	X221-LC (Rev 2)	X221-AI (Rev 2)	X221 (Rev 4)	X221-AI (Rev 4)
Carrier board logic	1-2W	1-2W	1-2W	1-2W
1.8/3.3/5V power converter efficiency	>90%	>90%	>90%	>90%
Power in converter efficiency	-	>90%	-	>90%

If you intend to use MAXN mode, the LC version is better suited because it does not have a power limiting input converter. The full version features high voltage power in converter with an output of 12V 5A, so that a maximum power setting of 30W is recommended.

It is possible to bypass the power input converter by moving two 0805 beads as seen in the picture below. With this patch the input voltage is limited to 12V as the power input converter is bypassed.

SECTION 4 Features

4.1 Crypto authentication chip

Pin	Description
Model	ATSHA204A-MAHCZ-T
Datasheet	https://ww1.microchip.com/downloads/en/DeviceDoc/ATSHA204A-Datasheet-40002025A.pdf

The crypto chip can be used for authentication, software licensing and copy protection.

4.2 Safety MCU

4.2.1 Features

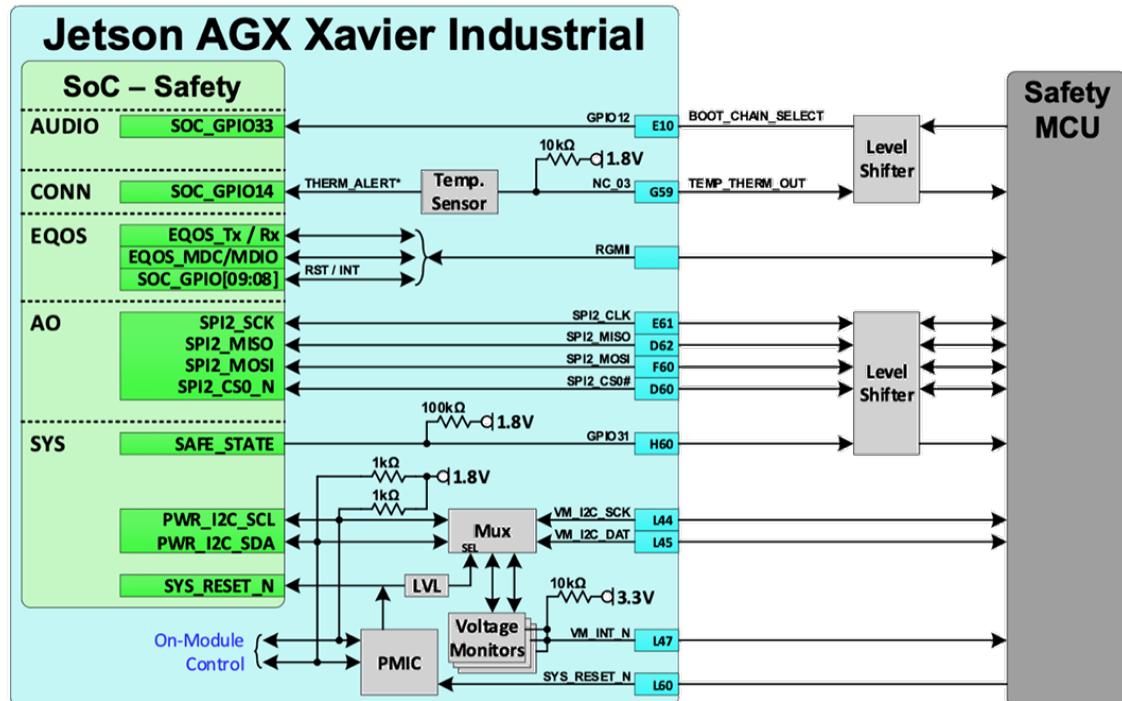

- Ability to control power management of carrier board and AGX Xavier
- Select boot chain (GPIO)
- Retrieve internal status (SPI)
- Monitor internal power rails (I2C)

For further details refer to NVIDIA documentation:

Jetson Xavier OEM product design guide (NVIDIA Jetson download center: 15.5 Safety MCU)

4.2.2 Block diagram of Safety MCU

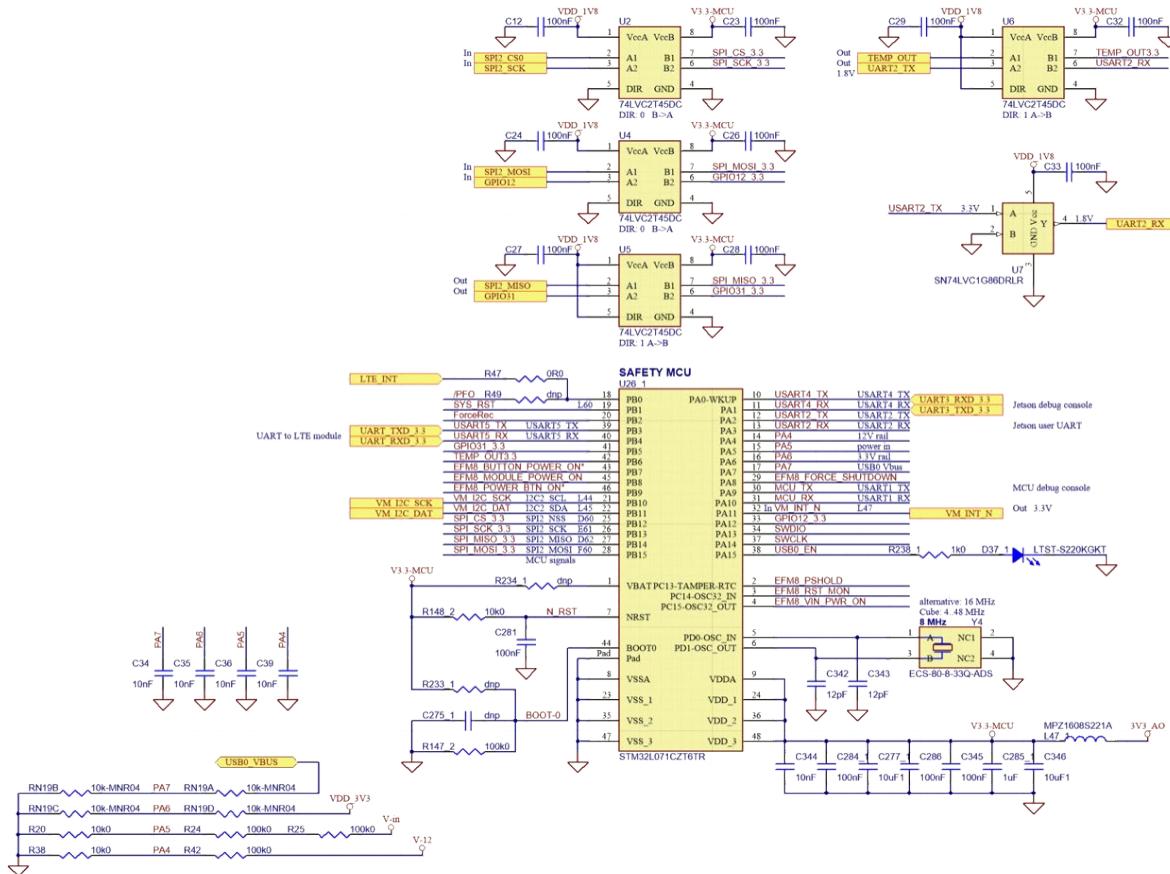

Figure 15-5. Safety MCU Connections

4.2.3 Schematic of Safety MCU section

Please check that your model has a Safety MCU. If your model does not have a safety MCU you will have the basic MCU.

4.2.4 Pinout basic MCU

STM32L031G6U6TR

Pin	Description	Socket pin	Note
1	3V3_AO	3.3V	
2	MCU_LED	5V tolerant	
3	ForceRec		
4	MCU_RESET	With 3.3V pullup	
5	3V3_AO	3.3V	
6	EFM8_BUTTON_POWER_ON*		
7	EFM8B10_D_ONKEY_N		
8	PA6		
9	EFM8_ACOK		
10	EFM8_PSHOLD		
11	EFM8_FORCE_SHUTDOWN		
12	EFM8_RST_MON		
13	PA7	USBO_VBUS/2	
14	/PFO		
15	SYS_RST		
16	GND		
17	3V3_AO	3.3V	
18	3V3_AO	3.3V	
19	MCU_TX	Connected to J14 pin 2	
20	MCU_RX	Connected to J14 pin 3	
21	SWDIO	Connected to J14 pin 5	
22	SWCLK	Connected to J14 pin 4	
23	USBO_EN		
24	EFM8_VIN_PWRER_ON		
25	EFM8_MODULE_POWER_ON		
26	EFM8_POWER_BTN_ON*		
27	BOOT0		
28	GND		

SECTION 5 Pinout description

5.1 J2 - POWER PORT

Molex Micro Fit 3.0 (alternative power input)

5.2 J4 - Ethernet

RJ45

Standard pinout.

5.3 J5 - MCU UART

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	3.3V		
2	UART_TX	Safety MCU pin 39	3.3V, MCU user UART to connect to LTE module
3	UART_RX	Safety MCU pin 40	3.3V, MCU user UART to connect to LTE module
4	GND		

5.4 J6 - CAN1

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	5V		max 500mA (with current limiting switch)
2	CAN_H	B61	2.5V center voltage, with CAN transceiver
3	CAN_L	H61	2.5V center voltage, with CAN transceiver
4	GND		

5.5 J7 - I2C

Pico blade 1.25mm

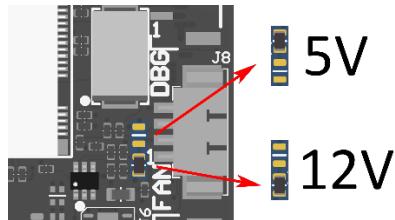

Pin	Description	Socket pin	Note
1	3.3V		
2	SCL	J61	3.3V, open drain
3	SDA	K61	3.3V, open drain
4	GND		

5.6 J8 - FAN

Pico blade 1.25mm

Pin	Description	Socket pin	Note
1	GND		
2	12V		1A
3	TACH	E54	1.8V input 100K pull up to 1.8V, fan speed tacho
4	PWM	K62	open drain output with 10k pullup to 12V

For the use of a 5V fan there is an option to resolder a component appropriately.

5.7 J10 - Debug

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	3.3V		
2	UART3_TX	H62	3.3V, AGX Xavier debug console transmit
3	UART3_RX	K60	3.3V, AGX Xavier debug console receive
4	GPIO13_OUT	G7	3.3V, G7 (AGX Xavier ball), output from Jetson
5	GPIO4_IN	B59	3.3V, B59 (AGX Xavier ball), input to Jetson
6	GND		

5.8 J11 - HDMI

Standard pinout, connected to DP-2

5.9 J12 - CAN0

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	5V		max 500mA (with current limiting switch)
2	CAN0_H	F58	2.5V center voltage, with CAN transceiver
3	CAN0_L	D59	2.5V center voltage, with CAN transceiver
4	GND		

5.10 J14 - MCU

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	3.3V		
2	MCU_TX		3.3V, MCU console debug port, transmit, 115200 baud, 8N1
3	MCU_RX		3.3V, MCU console debug port, receive, 115200 baud, 8N1
4	SWCLK		ST-Link programming interface of MCU
5	SWDIO		ST-Link programming interface of MCU
6	GND		

With the AI model of the X221 you have access to the safety MCU features. Please contact Auvidea for more information.

The basic MCU of the non AI models only handle power up functionality.

5.11 J15 - 2x USB 3.1

Standard pinout (type A).

10Gb/s.

Power can be Enabled/Disabled with GPIO22

Nexus-3815RFY

Pin	Description	Socket pin	Note
1	Vin		1A, 5V
2	USB3_D_N	G10	
3	USB3_D_P	G11	
4	GND		
5	UPHY_RX11_N	D13	
6	UPHY_RX11_P	D12	
7	GND		
8	UPHY_TX11_N	H13	
9	UPHY_TX11_P	H12	
10	Vin		1A, 5V
11	USB1_D_N	C10	
12	USB1_D_P	C11	
13	GND		
14	UPHY_RX6_N	B17	
15	UPHY_RX6_P	B16	
16	GND		
17	UPHY_TX6_N	K16	
18	UPHY_TX6_P	K17	
19	GND		
20	GND		
21	GND		
22	GND		

5.12 J17 - MICRO USB

Standard pinout.

Host and device mode supported.

Powered by power limiting switch with 500mA.

5.13 J18 – Wi-Fi

JST-GH 1.25mm

Pin	Description	Socket pin	Note
1	3.3V		
2	WPS1		Connects to pin 6 of LM823-Module 1
3	WPS2		Connects to pin 6 of LM823-Module 2
4	GND		

Prepared for LM823 3.3V modules.

Wi-Fi options can be found in the Wi-Fi Appendix.

Wi-Fi bays for modules are only supported on the AI version and will not work with the standard configuration as the necessary components are not present.

For options including LM823 modules solder on please contact Auvidea.

5.14 J19 - SUPER CAP UPS

For optional super cap addon board.

This will support a graceful power down in case of a power outage.

5.15 J20 - PCIEx4/x1/USB/UART/I2C/GPIO

DF17(3.0)-80DS-0.5V (57)

Extension connector for variety of extension boards.

SECTION 9 Appendix B [GPIO]

9.1 GPIO control

This example shows how to set and readout GPIO 414.
For different GPIO numbers replace 414 accordingly.

9.1.1 Export GPIO

```
nvidia@nvidia-desktop:~$ echo 414 > /sys/class/gpio/export
nvidia@nvidia-desktop:~$
```

9.1.2 Change direction to in

```
nvidia@nvidia-desktop:~$ echo in > /sys/class/gpio/gpio414/direction
nvidia@nvidia-desktop:~$
```

9.1.3 Change direction to out

```
nvidia@nvidia-desktop:~$ echo out > /sys/class/gpio/gpio414/direction
nvidia@nvidia-desktop:~$
```

9.1.4 Set GPIO low

```
nvidia@nvidia-desktop:~$ echo 0 > /sys/class/gpio/gpio414/value
nvidia@nvidia-desktop:~$
```

9.1.5 Set GPIO high

```
nvidia@nvidia-desktop:~$ echo 1 > /sys/class/gpio/gpio414/value
nvidia@nvidia-desktop:~$
```

9.1.6 Readout GPIO value

```
nvidia@nvidia-desktop:~$ cat /sys/class/gpio/gpio414/value
0
nvidia@nvidia-desktop:~$ cat /sys/class/gpio/gpio414/value
1
```

9.2 GPIO number reference sheet for AGX Xavier/Industrial

This sheet gives easy access to GPIO numbers used in the Linux environment.

Pin number (Socket Number)	AGX Xavier GPIOName	AGX Xavier GPIONumber	AGX Xavier Pin direction	AGX Xavier Industrial GPIOName	AGX Xavier Industrial GPIONumber	AGX Xavier Industrial Pin direction

9.3 How to calculate GPIOs

The above list should include every GPIO there is. This “how to” may help you find errors we did in our documentation or to calculate GPIOs for upcoming models as the NVIDIA Jetson Orin.

9.3.1 GPIOnumber

The basic formula:

$$\text{GPIOnumber} = \text{GPIOletter} * 8 + \text{GPIOdigit} + \text{GPIOoffset}$$

9.3.2 GPIOletter

The GPIOletter is located between [GPIO3_P] and [.digit]

GPIOname	GPIOletter	GPIOletter (referenced)
GPIO3_PK.04	K	10 (for AGX Xavier)
GPIO3_PCC.07	CC	2 (for AGX Xavier)

This letter needs to be referenced to a number.

This number is individual to every Jetson module and can be found in the “tegra-gpio.h” (name may differ depending on module).

The Table is included at the end of this How to.

9.3.3 GPIOdigit

The GPIOdigit is easiest to get and can be extracted directly from the name.

GPIO3_PO.[GPIOdigit]

GPIOname	GPIOdigit
GPIO3_PK.04	4
GPIO3_PCC.07	7

9.3.4 GPIOoffset

The offset is connected to the GPIOletter. The same GPIOletter has always the same GPIOoffset for one specific module and only differs for AON cores.

The table for the Jetson AGX Xavier and AGX Xavier Industrial is shown later.

9.3.5 Example

Calculating GPIO number GPIO3_PK.04 for Jetson Xavier NX:

$$\begin{aligned}\text{GPIOnumber} &= \text{GPIOletter} * 8 + \text{GPIOdigit} + \text{GPIOoffset} \\ \text{GPIOnumber} &= 372 = 10 * 8 + 4 + 288\end{aligned}$$

9.3.6 Table

SECTION 10 Appendix C [I2C]

10.1 I2C device bus

I2C Examples of configurations and how to use.

Bus	GEN1_I2C	GEN2_I2C	GEN3_I2C	CAM_I2C
Pins	185 and 187	189 and 191	232 and 234	213 and 215
Voltage (native)	3.3V	3.3V	1.8V	3.3V
Nano device				6
TX2 NX device	0			
Xavier NX device	1			2
Crypto chip		ATSHA204A		
CSI-2 camera	CSI-CD	CSI-E	CSI-F	CSI-AB
GPIO header	27 and 28	3 and 5		
EEPROM		24LC024		

10.2 I2C usage of devices and registers

10.2.1 List i2c devices on a specific bus

Syntax: i2cdetect [options] <busNr>

```
test@test-desktop:~$ i2cdetect -y -r 8
      0  1  2  3  4  5  6  7  8  9  a  b  c  d  e  f
00: -- -- -- -- -- -- -- -- -- --
10: -- -- -- -- -- -- -- -- -- --
20: -- -- -- -- -- -- -- -- -- --
30: -- -- -- -- -- -- -- -- -- --
40: -- -- -- -- -- -- -- -- -- --
50: -- -- -- -- -- -- -- -- -- --
60: -- -- -- -- -- -- -- -- -- --
70: -- -- -- -- 76 --
test@test-desktop:~$
```

10.2.2 Dump i2c device registers

Syntax: i2cdump [options] <busNr> <deviceAddress>

```
test@test-desktop:~$ i2cdump -y -f 8 0x76
No size specified (using byte-data access)
  0  1  2  3  4  5  6  7  8  9  a  b  c  d  e  f  0123456789abcdef
00: 00 00 ff ff 00 00 ff ff XX XX XX XX XX XX XX .....XXXXXXXXXX
10: XX XXXXXXXXXXXXXXXXXX
20: XX XXXXXXXXXXXXXXXXXX
...
d0: XX XXXXXXXXXXXXXXXXXX
e0: XX XXXXXXXXXXXXXXXXXX
f0: XX XXXXXXXXXXXXXXXXXX
test@test-desktop:~$
```

10.2.3 Set register value:

Syntax: i2cset [options] <busNr> <deviceAddress> <register> <address> <value>

```
test@test-desktop:~$ sudo i2cset -y -f 8 0x76 0x06 0x00
test@test-desktop:~$
```

10.2.4 Read register value:

Syntax: i2cget [options] <busNr> <deviceAddress> <register> <address>

```
test@test-desktop:~$ sudo i2cget -y -f 8 0x76 0x06
0x00
test@test-desktop:~$
```

10.2.5 Test IMX219 camera stream

The parameter `sensor-id=` describes the camera target. This id can be found by using `ls /dev/`. If the camera correctly plugged in then there should be a device called `/dev/videoX`, where X is the camera id.

```
test@test-desktop:~$ gst-launch-1.0 nvarguscamerasrc sensor-id=0 ! 'video/x-
raw(memory:NVMM), width=(int)1280, height=(int)720, format=(string)NV12,
framerate=(fraction)30/1' ! nvvidconv ! queue ! xvimagesink
```

SECTION 11 Appendix E [Wi-Fi]

This appendix describes how you can bring Wi-Fi functionality to one of Auvidea JN boards in case you did not choose one with Wi-Fi already integrated.

Please note that exclusively USB-only Wi-Fi cards are supported at the moment.

This excludes PCIe Wi-Fi cards from Intel or other vendors.

Future development aims to also provide solutions for PCIe Wi-Fi cards.

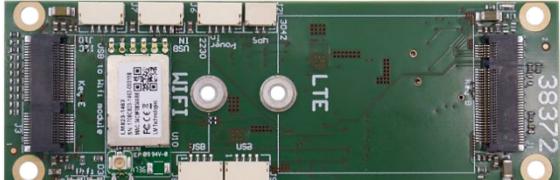

Please contact Auvidea for custom solutions when needed.

11.1 Options from AUVIDEA

11.1.1 U100 Adapter

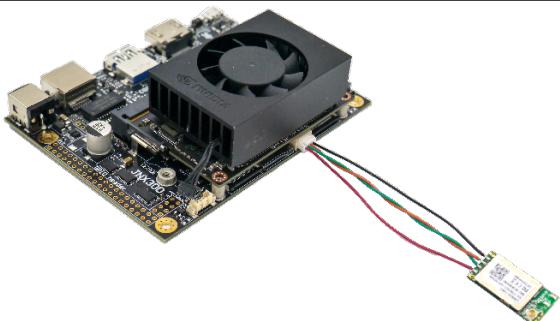

The U100 is an adapter board with four port USB 2.0 hub and 1x M.2 Key E slot for USB only Wi-Fi cards and M.2 Key B for LTE cards.

A version of U100 with already integrated LM823 Wi-Fi is available from Auvidea.

	U100	Note
Image		This adapter connects to the J8 connector as shown in "LM823 with cable" https://auvidea.eu/product/38372/

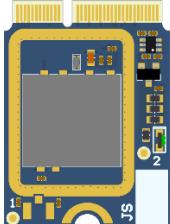

11.1.2 LM823 with cable

Simple solution to connect a LM823 (5V only!) module to the J8 connector.

	Setup example	Kabel + LM823-module
Image		

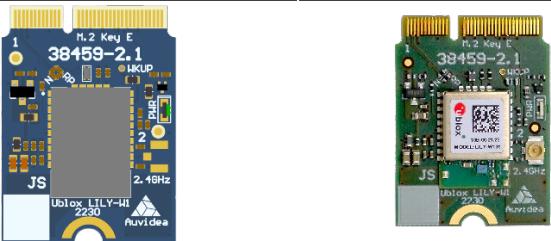

Please contact Auvidea for samples.

11.1.3 38458 Wi-Fi card

	38458 Wi-Fi card	Note
		M.2 Key E Wi-Fi card with RTL8188 module.

Please contact Auvidea for samples.

11.1.4 38459 Wi-Fi card

	38459 Wi-Fi card	38459 Wi-Fi card	Note
			M.2 Key E Wi-Fi card with Ublox Lily W-131 module.

Please contact Auvidea for samples.

11.1.5 U101 Adapter

[in development] A simple adapter from internal USB connector to M.2. Enables the use of USB only Wi-Fi cards.

Please contact Auvidea for samples.

11.1.6 U102 Adapter

[in development] A simple adapter board for the LM823 module with 3.3V power for the 3.3V version of LM823.

Please contact Auvidea for samples.

11.2 Options from other sources

11.2.1 ST60-2230C-UU by Laird

The M.2 Key E ST60-2230C-UU by Laird is evaluated and validated from Auvidea. Can be installed in the U100 Adapter. Auvidea can provide this card. Please ask for a quote.

11.2.2 Further modules

Also, any M.2 USB only Wi-Fi cards should be compatible with the boards from Auvidea. When using different modules then suggested you must conduct your own verification process.

11.3 DIY integration

This example shows the integration of LM823 Wi-Fi module into the JN30D (38488-2). Similar steps may be applicable to your product.

Please contact Auvidea for support if you have problems with different carrier boards.

You will need:

- LM823 Module (3.3V or 5V)
- Three beads (0201 0-Ohm)
- Soldering skills

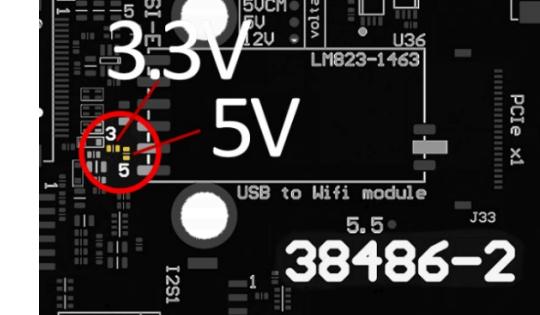

11.3.1 Enable USB interface

The LM823 module when soldered to the appropriate bay is using the USB 2.0 lanes from the J8 USB connector. When performing this modification, the J8 USB port must not be used afterwards!

	Location marker	Note
USB-beads		Solder two beads next to the J8 USB 2.0 connector (vertical orientation) to the location marked with the red circle. This will connect J8 to the LM823 solder pins.

11.3.2 Set voltage

On the underside please first set the appropriate voltage for your LM823 module.

Voltage select	Location marker	Note
		<p>Soldering on a bead to either the 3 (3.3V) or 5 (5V) location as displayed in the picture. Please check your LM823 module needs.</p>

11.3.3 Soldering on Module

LM823 bay	Location marker	Note
		<p>The LM823 module can be easily soldered to the pins.</p>

11.3.4 Result

Reference	Location marker	Note
		<p>After soldering on your module your result should look like displayed here.</p>

After connecting the antenna to the Wi-Fi module, you can start your system and test if it gets recognised.

11.4 Test Wi-Fi module connection

11.4.1 With GUI

You can check Wi-Fi functionality with the Ubuntu GUI

Wi-Fi test	Ubuntu	Note
		After installing a Wi-Fi module, it should be a visible network in the Ubuntu Network GUI.

11.4.2 Without GUI

USB devices can also be listed with lsusb:

Module is highlighted in red.

```
test@test-desktop:~$ lsusb
Bus 002 Device 001: ID 1d6b:0003 Linux Foundation 3.0 root hub
Bus 001 Device 003: ID 0bda:8179 Realtek Semiconductor Corp. RTL8188EUS 802.11n Wireless Network
Adapter <- LM module
Bus 001 Device 006: ID 1058:25a2 Western Digital Technologies, Inc.
Bus 001 Device 005: ID 04ca:007d Lite-On Technology Corp.
Bus 001 Device 004: ID 046d:c077 Logitech, Inc. M105 Optical Mouse
Bus 001 Device 002: ID 05e3:0608 Genesys Logic, Inc. Hub
Bus 001 Device 001: ID 1d6b:0002 Linux Foundation 2.0 root hub
test@test-desktop:~$
```
